Specifications for #25 Pump

(Item #8180 and #8184)

Wine Transfer Pumps

Commercial quality pumps for transferring wine throughout the wine production facility. The bronze model is recommended for the advanced home winemaker and the stainless steel model is perfect for the small production winery. Both are electric, self-priming, impeller pumps. They run at a low 1400 rpm's which handles the wine or juice more softly. Enological tubing for these pumps can be purchased in custom lengths. Not intended for must or wine with seeds or other solid particles.
